Spill Kit Training

Course Detail

Duration	4 hours.
Group size	8 - 12
Location	Your workplace or other suitable location

Topics

Theory

- o safety data sheets
- o chemicals in the workplace
- o chemical hazards
- o managing small chemical spills
- o personal protective equipment
- o incident reporting
- o restocking spill kits

Practical

- o spill kit contents
- o spill kit procedures
- o spill kit techniques

Overview

Our courses are designed for small workplace spills which can be managed by standard off-the-shelf kits on known chemical substances.

After training we want people to be able to size up a spill, decide on the appropriate course of action and apply the spill kit material as intended safely.

We will also ensure the training is aligned to your workplace procedures.

Not all spill kits are created equal. It is essential that you know that the type of spill kit you have is suitable for your workplace.

Note: This course is separate from, and does not form part of, a chemical handling unit standard.

Unit Standards

Currently there is no unit standard on the NZ Qualification Authority (NZQA) National Qualification Framework for this training
